

Rolgordijnen

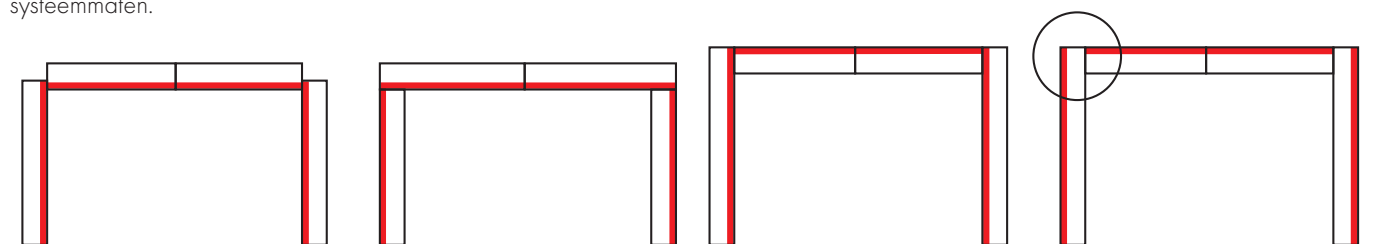

10 Meten & plaatsen

10.1. Opmeten

Hoe maak je hoeken in erkers?

Wanneer je geconfronteerd wordt met een erker of ramen die in een hoek op elkaar staan dan moet je goed nadenken wat je wil. Waar zijn de hindernissen? Waar zijn de opengaande delen van ramen, welke delen moeten kunnen kippen? Welke openingen tussen doeken zijn aanvaardbaar/gewenst? Waar moeten de doeken aansluiten? Welke breedte van rolgordijn geef je op in de verschillende gevallen? Bij welke oplossingen heb je speling op de positie van je producten?

Het bespreken en bekijken van al deze vragen kan leiden tot de volgende vier situaties. Afhankelijk van de gekozen situatie dienen er andere maten ingegeven te worden.
Hou hiermee rekening dat de doekmaten anders zijn dan de systeemmaten.

Tips bij opmeting

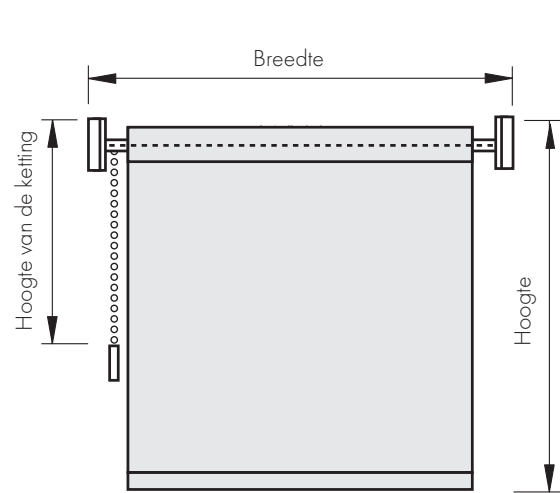

De maatopname valt steeds ten laste van de inrichter of stylist. Let op dat bij sommige keuzes er esthetische gevolgen zijn.

De breedte en hoogtes die doorgegeven moeten worden zijn de waarden inclusief de steunen en de eindkapjes.

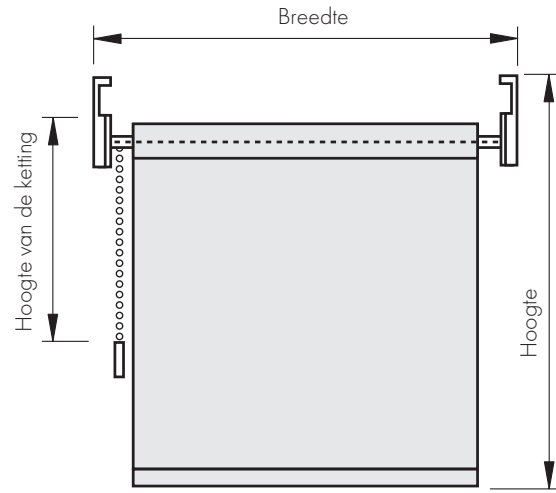

Tips voor het inmeten

- Meet altijd op drie plaatsen om breedte- en hoogteverschillen in het kozijn te ondervangen.
- Meet twee keer om vergissingen te voorkomen.
- Houd rekening met eventuele obstakels zoals raamhendels, -grepen, radiatoren, waterleidingen, etc. Zorg dat niets de werking van het rolgordijn in de weg zit.
- Heeft u naar binnen draaiende deuren en/of ramen? Houd dan rekening met voldoende montagehoogte.
- Maten moeten tot op de millimeter worden doorgegeven.
- Hou rekening met een zekere gewilde speling tov de spannende maten

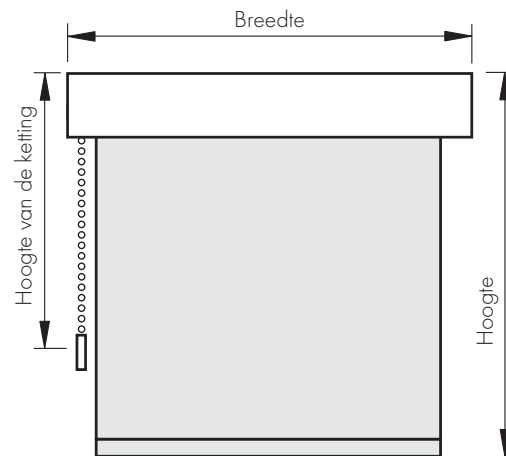

De plaatsingshoogte is ook belangrijk i.f.v. child safety.

10.3. Onderhoud van rolgordijnen

Om je rolgordijnen in optimale staat te houden, is regelmatig en correct onderhoud belangrijk. Hieronder vind je enkele tips:

- Stof verwijderen: Gebruik een plumeau, stofdoek of de zachte borstel van een stofzuiger om wekelijks stof te verwijderen. Zo voorkom je dat vuil zich ophoopt.
- Vlekken reinigen: Reinig vlekken lokaal met een licht vochtige doek en een mild schoonmaakmiddel. Wrijf voorzichtig om schade aan de stof te voorkomen. Vermijd agressieve producten of overvloedig watergebruik.
- Mechanisme controleren: Controleer af en toe de ketting, het oprolmechanisme of de motor op vlotte werking. Smeer bewegende delen indien nodig lichtjes bij (raadpleeg de handleiding).
- Vermijd vochtige ruimtes: Hang rolgordijnen bij voorkeur niet in ruimtes met hoge luchtvochtigheid zoals badkamers zonder goede ventilatie, om schimmelvorming te vermijden.
- Laat ze niet volledig afrollen: Rol het gordijn niet verder af dan technisch voorzien om schade aan de stof of het oprolsysteem te vermijden.

Met deze eenvoudige onderhoudstips verleng je de levensduur van je rolgordijnen en blijven ze er verzorgd uitzien.
